**Detailed Action**

1. The Applicant filed a "Request for Continued Examination" which was received on December 11, 2008, including an "Information Disclosure Statement" (IDS) presenting new documents to be considered by the Examiner. The Examiner analyzed the documents (as shown in the IDSs) and did not find any material in the documents that interferes with the disclosure of the independent claims 1, 27, 32, and 42.

***Allowable Subject Matter***

2. Claims 1-2 and 4-43 are allowed.
3. The following is an examiner's statement of reasons for allowance, as was previously stated in the Office Action mailed out May 6, 2008:

Claims 6-24, 26, 36-41 and 43, are allowed in view of the submission of the Terminal Disclaimer. Claims 1-2, 4-5, 25, 32-35, and 42, are allowed in view of the Examiner's amendment presented in the previous Office Action. Claims 27-31 are also considered to be allowable as shown below. The following is an examiner's statement of reasons for allowance for claims 1-2, 4-5, 25, 27-35, and 42.

With respect to the independent claims 1, 32, and 42, prior art fails to disclose or make obvious, in combination with other recited features of the claim limitations, a radiation source, system, and method, comprising an anode and a cathode that are configured and arranged to create a discharge, within a discharge element, in a substance in a discharge space between said anode and said cathode to form a plasma so as to generate electromagnetic radiation, said radiation source comprising a plurality of discharge elements, wherein said discharge elements are arranged around a rotation axis of said radiation source.

With respect to the independent claim 27, prior art fails to disclose or make obvious a method for operating a radiation source, constructed to have a low inductance, and comprising an anode and a cathode that are configured and arranged to create a discharge in a substance in a discharge space between said anode and said cathode to form a plasma so as to generate electromagnetic radiation, said method comprising generating an initial discharge followed by operating said radiation source so as to allow successive discharges to occur due to a substantially self-regulated oscillation within said discharge source. The key feature of the applicant's invention is the operation of the radiation source so as to allow successive discharges to occur due to a substantially self-regulated oscillation within said discharge source.

The dependent claims 2, 4-5, and 25; and 33-35, are allowable by virtue of their dependence upon the independent claims 1 and 32, respectively. The dependent claims 28-31 are allowable by virtue of their dependence upon the independent claim 27.

### ***Conclusion***

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
